## Mosquito Service

### FAQ Sheet

(Frequently asked questions)

#### **Why are mosquitoes a problem?**

*Mosquitoes are an area wide problem. The treatments should be done on an area wide basis by a mosquito control district, city, or county governments. In reality this does not happen frequently enough, if at all. In our area, the funds are not available or in some case the expertise to handle the problem just isn't available.*

#### **Is there anything I can do?**

*You can get rid of all breeding places on your property. Look for any standing water. Some examples are dishes under potted plants, knotholes in trees, old tires, buckets, etc. It doesn't take a lot of water. Be thorough!*

#### **What are you going to do?**

*We will treat the outside of the house, shrubs, and etc. with a high volume application (up to 10 gallons per 1,000 sq. ft.). In some areas we will also use a repellent product.*

#### **How often does this need to be done?**

*That depends on how often you need service. Some will need the service only if they have a special event outside. Some will need the service on an occasional basis. Others will need it on a regular basis, especially if they spend a lot of time outdoors in the evenings.*

#### **How long should the treatment it last?**

*We anticipate a 2 to 4 week residual with at least an 80% reduction in mosquitoes.*

#### **Ok, this sounds great, but how much does it cost?**

*Each house will be different. I'll use our house as an example: a 1,800 sq. ft, 3 bedrooms, with a garage on the front corner. This would cost \$ 75.00 plus sales tax.*
